*Once dolomite was in place of ponds, everything was naturally flooded and water reservoirs formed. Here we built and equipped two fishing ponds for anglers. In one pond there are only trout, in the second pond you can catch carps, pikes. There is also a playground for children, swing kids can have a lot of fun while playing.*

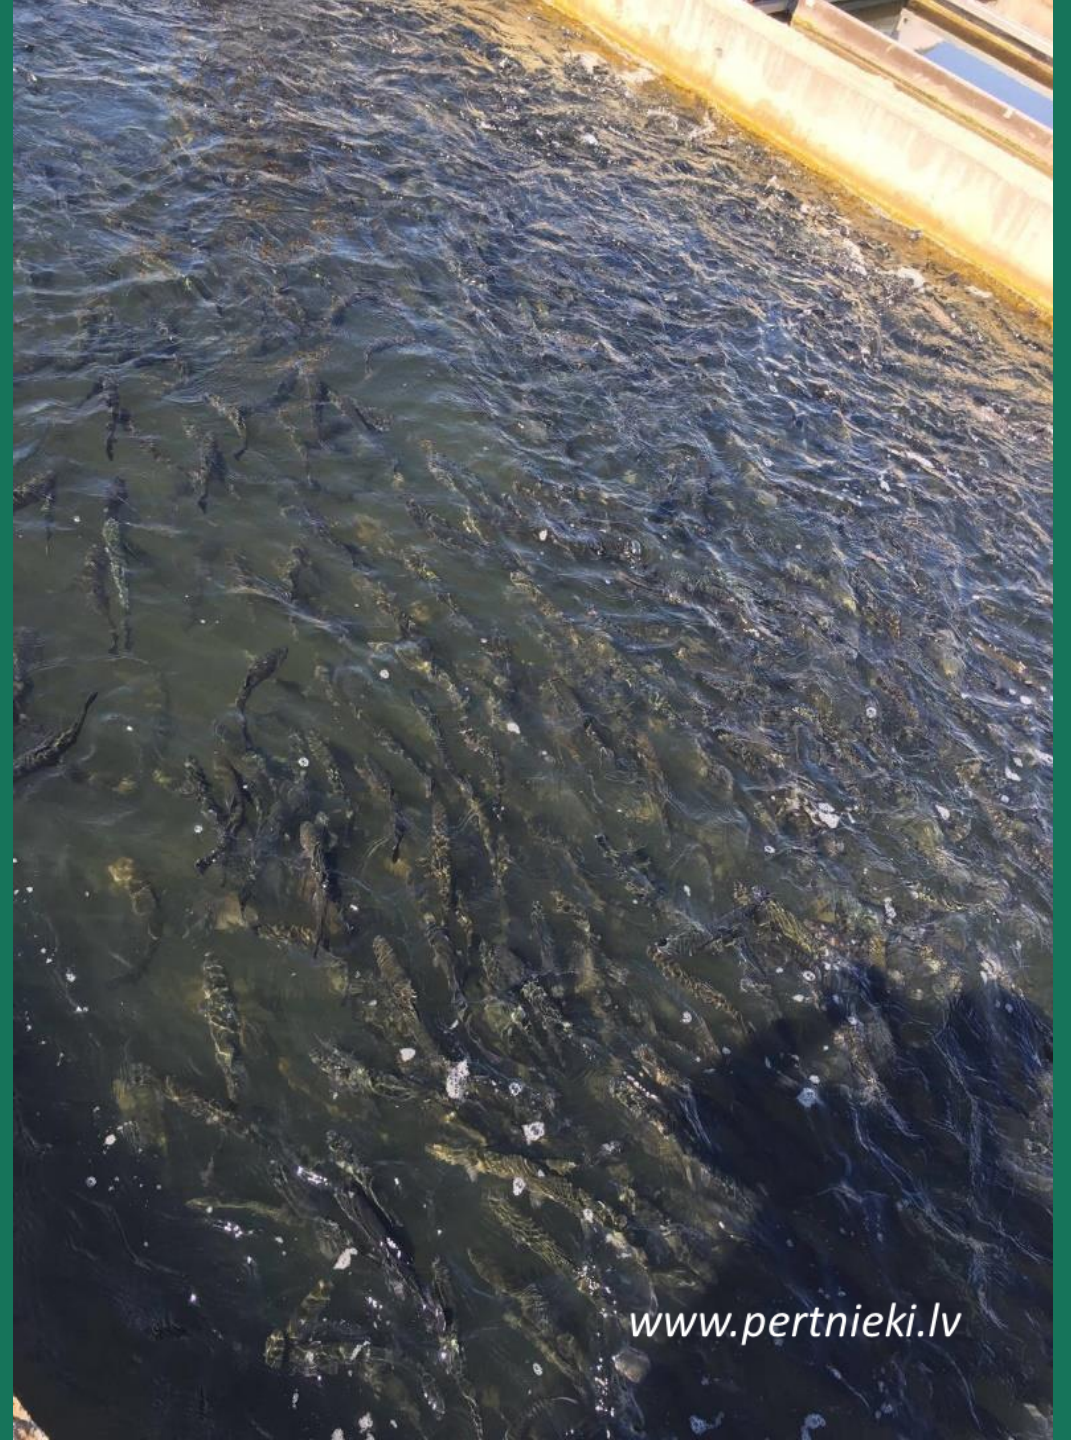

*Farmers grow trout, carp and stores. The fish are grown in a local fish incubator and then placed in clean, water-soluble ponds. Once dolomite was in place of ponds. The work stopped, the water was naturally flooded and water reservoirs were created, in which fish ponds were created and equipped. The depth of the trunk is up to 10 meters, the amount of water and the stream are generated by the source waters.*

*The fish grow naturally, using ecologically pure fish food,  
which is produced in Europe and in Latvia.*

*In 2017, 7,500 kg trout was captured in Pērtņieki, exceeding the 6.666 kg record for 1993 in Latvia.*

*- A larger caught carp - 21,50 kg.*

*The forehead is caught and delivered to the fish factory, which started its operation in January 2016, using European Union co-financing. The construction of the fish factory has used the latest construction technologies. The fish factory is equipped with the latest generation of technological and production equipment (smoke chambers, packaging equipment, etc.). Currently there are more than 150 different products in the fish factory.*
